

Genuine Bitcoin coin medals made of fine silver (999/1000)

The hype around Bitcoin & Co. is in full swing. By officially approving the Bitcoin ETF, the SEC (Security and Exchanges Commission) has made Bitcoin socially acceptable.

With 8 different designs, the coin medals of the Satoshi Project accurately and at the highest level showcase Bitcoin and the blockchain.

The Satoshi Project

***Satoshi** is not just a name. The name Satoshi Nakamoto is a pseudonym for the creator of the Bitcoin ecosystem and of course of Bitcoin.*

The Satoshi project sets a sign of the times. It connects coin collectors and crypto-enthusiasts.

A masterpiece of minting craftsmanship in 999 fine silver

*Quality minting in **21g Silber**, **1000 Sats**, Diameter: 37mm
With **real crypto transaction** on the Bitcoin network*

*Discover the many small details,
that you may only notice at second or third glance.*

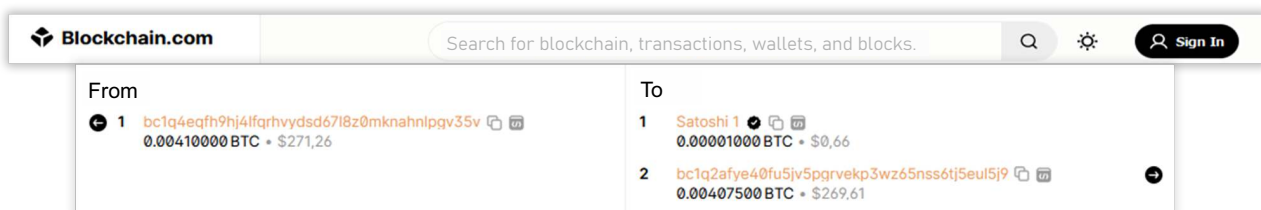

But that's not all – let yourself be surprised.

*The topic is already on everyone's lips in both the **collector community** and the **crypto community**.
Don't waste any time and **order today**- www.satoshi-silver.com*

The Highlights

The **coin medals of the Satoshi series** seamlessly align with the highest standards of coin collectors and crypto enthusiasts. These **masterpieces of minting and refinement** are real eye-catchers, symbolizing in style the connection between physical value and the revolutionary world of cryptocurrencies.

- **21g of fine weight corresponds to 21 million micrograms.**
A tribute to the maximum possible number of Bitcoins. This value can also be found on the minting.
- Also on the minting, you will find the value of **1,000 Sats** (similar to how the cent is the smallest unit of the euro, the "Satoshis" or "Sats" are the smallest unit of Bitcoin).
- For each coin medal, an amount of **1,000 Sats will be transferred to the Genesis Wallet.**
The transactions are **publicly visible** on the internet and thus verifiable. (For the **Humpback Edition**, the Sat amount for each coin medal is executed as an **individual transaction**. For the other editions, the transaction may be carried out as a collective transaction). **What's behind this and how it all works?**
– see www.satoshi-silver.com

- As the **standard packaging**, we have chosen the innovative **ApoPAXX®** packaging. The modern, compact, and secure way of storage. With a high-quality **acrylic capsule** and an **integrated stand**. The transaction hash of the collective transaction can be found on the accompanying certificate.

- The **Humpback Edition** comes in a luxurious and secure **acrylic block packaging**. The individual transaction hash of the **single transaction** is intricately **laser-engraved** into the acrylic block.
